* **CS-HDM3BRXP**

Important safety notice

Please read below safety instructions carefully before installation and operation:

1. Please pay attention to all the warning on this device.
2. Do not expose the unit to rain, moisture and liquid.
3. Do not put anything in to the device.
4. Do not repair or open the device.
5. Make sure to have proper ventilation.
6. Shut off power and make sure environment is safe before installation.
7. Do not plug-in/out the network cables and IR cables when it is in use this will avoid cable damage.
8. Use DC5V only. Make sure the specification matched if using 3rd party DC adapter.

Introduction

This HDMI over RF extender applies RF conversion technology to convert HDMI signals to HD digital TV signals by coax cable up to 700 meters. It has the advantage of great image quality and strong anti-interference ability and can connect with CATV splitter to realize one to many and many to many video matrix connection.

Features

1. Full compatible with HDCP.
2. Transmit up to 700 meters with RG6(75-5) at 1080P @ 60Hz.
3. Supports up to 100 channels.
4. Support CATV splitter and amplifier connection.
5. High quality image, long distance transmission and strong anti-interference ability.
6. Supports IR control channel switching.

* CS-HDM3BRXP

Package Contents

Installation Requirements

1. HDMI source device.
2. Display device with HDMI port.
3. RG5(75-5) or upper level coaxial cables

Panel Description

1. HDMI to TX

1. RF TX: RF signal send interface.
2. RESET: Press to reset.
3. HDMI INPUT: HDMI signal input.
4. DC5V: DC 5V power input.

2. RF to HDMI receiver RX

1. RF RX: RF signal receive interface.
2. LINK: signal connection LED indicator.
3. IR IN: IR receiver extension cable interface.
4. HDMI OUTPUT: HDMI output.
5. DC5V: DC 5V power input.

Channel Parameters Settings

1. Channel setting button
2. Channel display screen

There are 100 (0-99) channels controlled by 2 buttons. Button left can select single digit and button right for tens digit. Combination of tens digit and single digit makes 99 channels total. TX and RX can build connection only when they are set to the same channel parameters and RX HDMI port outputs the corresponding A/V content.

IR remote control

The IR remote control is just used to set channel. For example, to set channel to 99, just aim the IR remote control to IR receiver and press numbers 9, 9 and enter.

Connection

One-to-one connection

NOTE: If less than 100' direct point to point, an attenuator or splitter is suggested.

6.2 One to many C connection: Connect one CATV splitter to realize splitter function.

Many to many connection: Connect two CATV splitters to build video matrix.

Note: For above "CATVsplitter1", it needs to take "OUT" as the signal input and "IN" as signal output. For "CATVsplitter2", just follow the marks on the panel description.

Other Notes

1. Cable length is suggested to be 300-700 meters. If cable is shorter than 100 meters, it needs a 20dBm (at least) signal attenuator to get image output.
2. Refer to appendix 1 for channel-frequency mapping table; refer to appendix 2 for the coaxial cable signal loss for different channel signal.
3. When using CATV splitter for 1 to many and many to many connection, it is suggested to use low consumption, high isolation and shielding 5-1000Mhz bi-directional communication splitter to build video matrix.

FAQ

- Q: It shows "NO SIGNAL" on Screen?
A: 1. Make sure to set TV source signal to correct channel.
2. If LINK led is not on, check if TX and RX channel settings are the same.
3. If coaxial cable is too long, please refer to appendix x1 to adjust channel setting.

- Q: Image is not normal after setting channel (splash screen, disturbance, mosaic etc)?
A: Make sure coaxial cable connection is stable. Try another channel or reset RX.

- Q: There is video image output but no sound?
A: Reset TX or re-up TX electricity.

8 SPECIFICATION

Items	Specification
HDMI signal	Full compatible with HDCP
HDMI DDC signal	5Vp-p(TTL)
HDMI input/output resolution	480i@60Hz, 480p@60Hz, 576i@50Hz, 576p@50Hz, 720p@50/60Hz, 1080i@50/60Hz, 1080p@50/60Hz
HDMI graphics resolution	1280x720@60Hz, 1920x1080@60Hz
video encoding	H.264
Audio encoding	MPEG2
Coaxial cable	RG6/RG7/RG11
frequency point	100~1000MHz
Effective bit rate	Max:31.6Mbits
insertion loss	<2dBm
RF TX output consumption	+0dBm
RF RX sensitivity	Please refer to Appendix 1
RF interface	imperial system (75Ω Type F)
Transmission delay	500ms
Power supply	DC5V/1A
Power consumption	TX<3.5W RX<3W
Enclosure material	Metal
Product dimension	130(W)x80(D)x22(H)*2pcs
Weight	TX:167g RX:169g
Color	Black

Appendix 1: Channel, frequency, cable distance mapping table

Channel (0-99)	Frequency band	Center frequency	Band width	RX sensitivity	RG6(75-5) cable transmission distance (meters)

Note:
Above cable length value is offered based on RG6 (75-5) cable transmission. Professional ones can calculate the transmission length for different material cables by referring to appendix 1 and 2.

For example, from appendix 1, it shows channel 5 receive sensitivity is -80dBm. From appendix 2, it shows 700 meters RG6 cable signal loss value is -61.91 dBm at 211MHz. This value is less than -80dBm and it is within the required range. To achieve stable signal transmission, it needs to consider the signal loss caused by cables and connectors quality and leave more dBm.
