HDM-EDIDB

Created to fulfill the unique needs of the Custom Integrator, Metra Home Theater Group's HDM-EDIDB is the Custom Integrators "Go to" EDID problem solver.

PRODUCT OVERVIEW

The new Metra Home Theater Group HDM-EDIDB was developed specifically for the video security integrator. It is no longer uncommon for the Integrator to supply video from a surveillance NVR/DVR to multiple displays via HDMI, and when this is required there is a very high probability of EDID failure. These symptoms will include (but are not limited to): no picture, picture size is wrong, picture is flashing, picture does not square with screen and no picture.

The problem and cause are well known, security NVR/DVR's have PC based video cards and while these are great for single display applications, it is a real headache for multi display jobs.

This is where the new HDM-EDIDB will save the integrators sanity and life, because the HDM-EDIDB will completely strip the EDID return information from any displays allowing the integrator to set the desired resolution and refresh rate of the NVR/DVR. With the EDID blocked there will be no conflict between the NVR/DVR and the video distribution system.

Installation is very simple, just plug the HDM-EDIDB directly into the HDMI port of your NVR/DVR, and then connect your HDMI distribution with an HDMI jumper into the HDM-EDIDB.
