

HDM-JRPLUS User Manual

The HDM-JRPLUS is the newest version of our HDM-JR. The HDM-JRPLUS will resolve the vast majority of EDID related issues such as:

- HDCP not supported
- Mode is out of range
- Audio Dropouts
- Long Time to Sync

The HDM-JRPLUS also will resolve voltage/current incompatibilities between devices.

Installation:

In 90% of the systems the HDM-JRPLUS will plug directly into the Source/AVR HDMI Output.

There are rare instances when the HDM-JRPLUS will work better plugged into the Display input, but please always try the Source side first.

Bandwidth Supported: 18 Gbps
