PRODUCT OVERVIEW

Plug into a better AV experience. By adding active technology to the extended length CL-rated MHY HDMI® cables, Ethereal provides an exceptional level of reliable high-definition performance in a slim, easy to install cable. Integrators can use the MHY Series to go longer distances without having to worry whether or not the system will work. These active cables excel at repairing the signal faults seen in copper cables to bring out the best picture and sound that today's enhanced components were built to deliver. Getting to 48Gbps in the past required a number of different "little black boxes" to amplify the performance bandwidth. Now, the active cable technology removes the distance roadblock by rebuilding the high-speed data to a display readable quality -without any additional electronics. The result is a slim, easy to maneuver cable suitable for tight spaces and rack installations with incredible data transfer speeds to achieve 4K/HDR or even BK, depending on its length.

- Supports 4K@60Hz HDR
- 24K Gold plated Grip-Lox connector for securing cable to source and display devices
- Ultra flexible slim profile cables excellent for use when added flexibility is needed
- Multi-layer shielding
- Audio return channel (ARC/eARC)
